## Saliva Alcohol Screening Tests

Trust Shipping, as agents, is proud to introduce you, to our 'Saliva Alcohol Screening Tests', in compliance with the recommendations of ISGOTT.

Why Saliva Alcohol Screening Tests, over other standard methods? Saliva Alcohol Screening Tests, can be maintained as solid evidence for the presence or non- presence of alcohol consumption. This simple, highly effective test allows you to tell if the individual being tested is under the influence of alcohol, putting you in control.

As per ISGOTT 13.4.3: Alcohol testing may be performed with an Evidential Breath Testing Device, which should conform to an industry-accepted standard.

Our Saliva Alcohol Screening Tests are a cost effective method of monitoring for alcohol consumption in your Zero Tolerance testing program. Our Saliva Alcohol Screening Tests are so effective that it has been approved by the US Department of Transportation (DOT) & USCG for required testing of all transportation and safety sensitive employees for blood alcohol concentrations above the federally mandated zero tolerance level of 0.02%. Our Saliva Alcohol Screening Tests are a simple one-step saliva screening test that works in a clean, non-invasive manner and provides results within 4 minutes.

Simply wet the test pad with saliva; development of a line on the test pad within 4 minutes indicates a blood alcohol concentration exceeding 0.02%.

Inappropriate consumption of alcohol can be a problem in many occupational, institutional and safety sensitive situations. Our test strips provides you with an easy yet effective tool in identifying alcohol consumption. And it is the most cost effective alcohol testing method available. For a very modest amount our test strips can help you avoid the risks associated with inappropriate alcohol consumption.
